

MONITOR YOUR MONITOR

Efficient Office Technology

- Turn monitors off at the end of the work day.
- Screen-savers do not save energy! Set your computer to go to sleep mode instead.
- Activate all power management features on computers and monitors.
- Check with your Information Technology department to see if it is possible to shut down computers overnight.

ENERGY STAR® qualified computers use 70% less energy than computers without enabled power management features, and ENERGY STAR® printers and monitors use up to 60% less energy than other models. New chip technologies make power management features more reliable, dependable, and user-friendly.
